## ***Special waste heat boiler with additional burner***

The waste heat boiler serves as a master boiler for the factory steam supply at constant temperature or pressure, so that a sensible "utilisation" of the hot gases is guaranteed. During "unsupervised operation of over 72 hours" - UO 72 hr - conductivity sensing monitors the fresh water for the onset of hardness as well as the condensate.

### **Technical data:**

Fuel:	Natural gas high caloric
Power:	1,250 kg/hr
Temperature:	Saturated steam
Pressure:	10 bar (ü) (unknown abbr.)
